Bear Down Bank: Contactless Card Readiness

A Data-Driven Strategy for Card Modernization

5,802
Total Cards

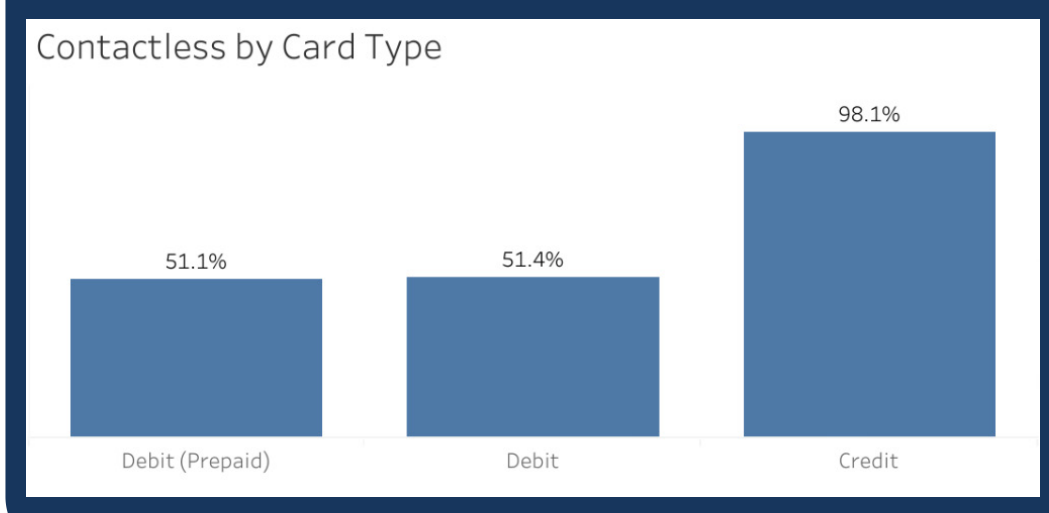

2,000
Customers

70.8%
Contactless Adoption

1,661
Cards Expiring

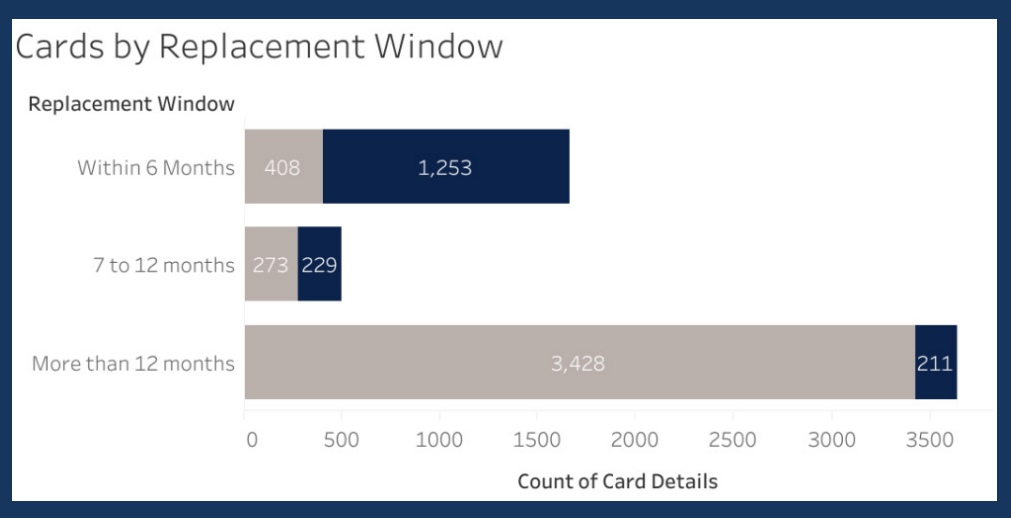

Debt Cards Present the Biggest Modernization Opportunity

Contactless adoption is highest for credit cards (98.1%), while debit (51.4%) and prepaid debit (51.1%) cards lag, making them the primary focus for replacement.

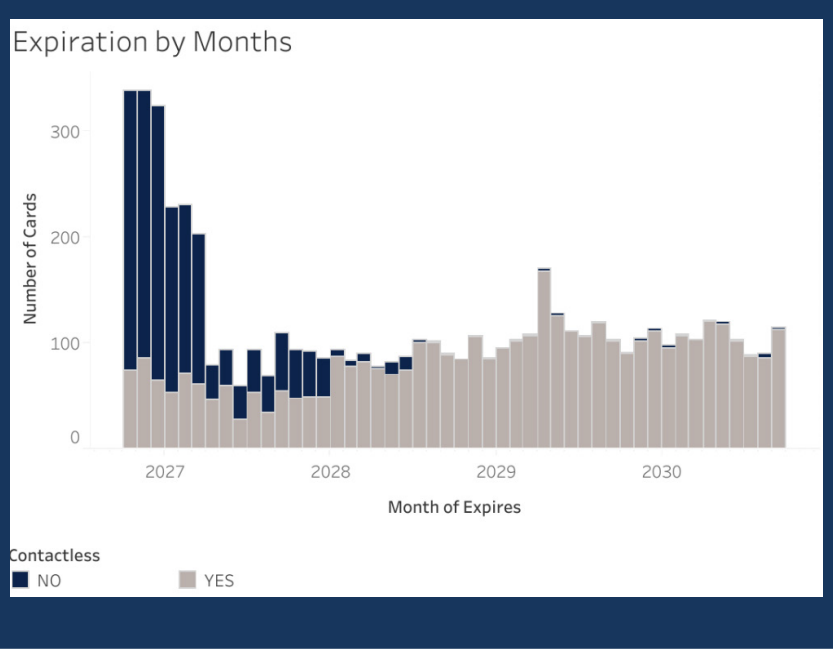

1,253 Non-Contactless Cards Expire Within Six Months

A targeted replacement of the 1,253 non-contactless cards expiring within six months can quickly increase contactless adoption while minimizing unnecessary costs.

Align Card Modernization With Upcoming Expirations

Non-contactless card expirations are concentrated in the earlier months, creating a clear opportunity to prioritize replacements based on the existing expiration schedule.

Recommendation

Prioritize replacing non-contactless debit and prepaid debit cards as they approach expiration. Start with eligible cards among the 1,253 non-contactless cards expiring within six months to improve adoption while minimizing early replacement costs.

Expected Impact

Increases contactless adoption, improves customer experience, and reduces unnecessary early replacement costs.
